The nucleic acids (and their complementary sequences) may be cu used as diagnostic agents for detecting the presence of nucleic acids cand their complementary sequences) may be cu used as diagnostic agents for detecting the presence of nucleic acids cand therefore, for diagnosing chlamydia infections. For example, they may complete the used as primers and probes for diagnostic polymerase chain reaction complete acids may be used to down regulate compression of the proteins and may be used to treat infections. The conclete acids may also be used to produce the protein antigens they cancel according to standard recombinant DNA methodologies. The complete acids may also be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for detecting contibodies may also be used as antigens for the production of antibodies may also be used as antigens for the production of antibodies may also be used as antigens for the production o

The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2957

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC Chamydia perminoniae. By generating antibodies against C. Chamydia perminoniae outer membrane complex, a polyclonal antibody (PAB 150) CC was obtained which reacted with outer membrane proteins. The CC antibody was used to identify the genes (see AAX06816-27) encoding CC omp4-Omp15 proteins (see AAX888417-28) in an expression library of CC c. pneumoniae DNA. The genes are situated in 2 gene clusters: CC omp12,11,10,5,4,13 and 14 in one cluster and omp6,7,8,9 and 15 in CC the other, and encode polypeptides of about 89.6-100.3 kba and CC about 56.1 kba. The invention provides a new species specific test CC for identifying mammals (including humans) infected with Chlamydia CC apneumoniae. The test comprises detecting antibodies specific for CC omp4-Omp15 or detecting nucleic acid fragments encoding these outer CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The CC mammals, the nucleic acids being particularly useful as DNA CC vaccines for effecting in vivo expression of antigens. The CC which are possibly associated with C. pneumoniae.

               This invention describes a novel nucleic acid (N1) encoding a Chlamydi pneumoniae protein (P1), given in the specification. The isolated nucleic dis useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to N1; (3) an expression and the protein activity of the conditions of N1; (3) and expressions are the conditions to N1; (3) and expressions are the conditions to N1; (4) and the conditions to N1; (5) and expressions are the conditions to N1; (6) and the conditions to N1; (7) and expressions are the conditions to N1; (8) and N1; (8) and N1; (8) are the conditions to N1; (8) and N1; (8) and N1; (8) are the conditions to N1; (8) are the cond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2554
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2470

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-NOV-1998;

```

This sequence encodes a Chlamydia antigen of the invention, designated CPN100639. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction

Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3000 BP; 858

ρ В Q 밁 B δÃ CC Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) CC was obtained which reacted with outer membrane proteins. The cantibody was used to identify the genes (see AAX06816-27) encoding CC omp4-Omp15 proteins (see AAW88417-28) in an expression library of CC. pneumoniae DNA. The genes are situated in 2 gene clusters: CC omp12,11,10,5,4,13 and 14 in one cluster and omp67,78,9 and 15 in CC the other, and encode polypeptides of about 89.6-100.3 kDa and 20 about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia CC about 56.1 kDa. The test comprises detecting antibodies specific for CC omp4-Omp15 or detecting nucleic acid fragments encoding these outer CC omp4-Omp15 or detecting nucleic acid fragments encoding these outer CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of CC mammals, the nucleic acids being particularly useful as DNA CV accines for effecting in vivo expression of antigens. The CC vaccines for effecting in vivo expression of antigens. The state of the control o Matches 1539; Query Match Best Local Sequence 2793 BP; 803 A; 681 C; 567 G; 121 118 AGTACTAACACAGGCACCTATACTCCTAAAAATACGACTACTGGAATAGACTATACTCTG 177 61 Local Similarity 1 ATGAAATCGCAATTTTCCTGGTTAGTGCTCTCTTCGACATTTGGCATGTTTTACTAGTTGT 60  $\vdash$ agcattgcaacttacggagcagatgcttctttatcccctacagatagctttgatggagcg TCCACTGTTTTTGCTGCAACTGCTGAAAATATAGGCCCCCTCTGATAGCTTTGACGGA--atgaaaatacccttgcacaaactcctgatctcttcgactcttgtcactcccattctattg Conservative 23.0%; 0; Score 646.4; DB 20; Length Pred. (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitts and sinusitis, asthmatic bronchitts, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                             This sequence encodes a Chlamydia antigen of the invention, designated CPN100639. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2;

                                                                                                This sequence encodes a Chlamydia antigen of the invention, designated CPN100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids choosing Chlamydia antigens in samples according to standard methods. The nucleic acids conding Chlamydia probes for diagnostic polymerase chain reaction to used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they concleic acids may also be used to produce the protein of antibodies proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting contibodies may also be used as diagnostic reagents for development of the proteins and the development of the protein antipodies. Chlamydia is a pathogen implicated in the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                     (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chlamydia antigen; diagnosis; infection; community acquired pneumonia; therapy; upper respiratory tract disease; bronchitis; sinusitis; adult-onset asthma; acute exacerbations of asthma;

CThis DNA sequence codes for the novel 90.0 kDa surface exposed CC protein Omp8 (see AAW88421) of the human respiratory pathogen CC Chlamydia pneumoniae. By generating antibodies against C. Cpneumoniae outer membrane complex, a polyclonal antibody (PAB 150) CC was obtained which reacted with outer membrane proteins. The CC antibody was used to identify the genes (see AAW06816-27) encoding CC Omp4-Omp15 proteins (see AAW88417-28) in an expression library of CC Cpneumoniae DNA. The genes are situated in 2 gene clusters: CC Omp11,110,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in CC the other, and encode polypeptides of about 89.6-100.3 kDa and CC for identifying mammals (including humans) infected with Chlamydia CC for identifying mammals (including humans) infected with Chlamydia CC omp4-Omp15 or detecting nucleic acid fragments encoding these outer CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The cucleic acids and proteins can also be used in the immunization of CC mammals, the nucleic acids being particularly useful as DNA CV vaccines for effecting in vivo expression of antigens. The cucleic acids and prevent atherosclerosis and bronchial asthma, CX which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               망
CC the 98kba putative outer membrane protein coding sequence The 3' primer CC contains the sequence encoding the C-terminal sequence of the putative CC cuter membrane protein and a BsrG1 restriction site. The stop codon was CC excluded and an additional nucleotide was inserted to obtain an in-frame CC C-terminal fusion with the Histidine tag. The PCR product was cloned CC into a eukaryotic expression vector (pCA-Myc-His) by restricting both CC the vector and the PCR product with Not1 and BamH1 and performing a C ligation reaction. This expression vector was injected intranuscularly CC and intranasally into mice, which were subsequently inoculated with CC chamydia pneumoniae. The chamydial lung titers of the immunised mice were lower than those of the controls. Thus the 98kDa putative outer membrane protein can be used as a vaccine to provide protection against Chlamydia infections, especially Chlamydia pneumoniae infections.

The polypeptide may also be administered orally to treat Chlamydia infection. The present sequence may also be used in the construction of attenuated Chlamydia strains that can over-express the CC gene or express it in a non-toxic form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29-OCT-1998;
